

# Whitehouse Consultants

working **internationally** on  
**JD Edwards** solutions

By concentrating specifically on JD Edwards World and EnterpriseOne, Whitehouse has been able to build an excellent reputation for the quality of our consultants and the selection of complementary products and tools that we offer to unlock your system's real value.

Whitehouse Consultants can manage your projects and international deployments anywhere in the world from our operations in the **UK, France, Poland, Australia and Asia.**

Whitehouse Consultants, founded in 1991, was instrumental in helping JD Edwards establish its business in Europe and was appointed the first Partner in the UK in 1992. We are now an Oracle Certified Advantage Partner, still concentrating solely on JD Edwards World and EnterpriseOne solutions. Whitehouse works internationally, with operations in the UK, France, Poland, Australia and Asia.

Our mission to accelerate the return on investment in an ERP solution, with an emphasis on:

- The quality of the solution
- Durability of the solution
- Reduction of risks, delays and costs
- Transfer of competence

Our reputation is based on the quality of our consultants who must have at least three years' experience of JD Edwards and have completed three implementations. In addition, our consultants have both business experience and JD Edwards product knowledge. We have a truly international capacity, with access to over 120 consultants, many with multiple languages. Our experience and our methodology allow us to manage your projects and international deployments, anywhere in the world.

**Our competencies include full life cycle projects, upgrades and implementation of specific modules as well as the technical infrastructure to support them.**

### Project Implementation:

Whitehouse has the skills and resources to take ownership of the entire project or to provide relevant skills to supplement a customer's in-house team. We can provide technical assistance during the installation, deployment and the setting up of custom built interfaces and data conversions. We can also ensure that post go-live support is in place to offer functional and technical maintenance in varying forms.

### Upgrades:

We have the expertise to manage your upgrades either on your system or using our internal laboratory platform. We can manage your technical migrations (World and EnterpriseOne).

### Purge & Archive:

Systems slow down as databases grow out of control and companies are faced with costly processor upgrades. An alternative is to implement some 'good house-keeping' and consider purging and archiving data. ARCTOOLS allows users to purge and archive whilst maintaining integrities. This powerful, yet cost effective tool, is ideal for both JD Edwards World and EnterpriseOne, featuring a JD Edwards module with built-in rules. It is compatible with DB2 and Oracle & SQL/Server databases.

Whitehouse focuses on a single goal: finding the solution that works best for each customer's unique circumstances. Please contact us to discuss your situation and learn more about the ways in which Whitehouse Consultants can help you internationally.
