

# JD EDWARDS ENTERPRISEONE MANUFACTURING - PDM

**ORACLE**

JD EDWARDS ENTERPRISEONE

## KEY BENEFITS

- Integrate product information across manufacturing modes
- Improve visibility into engineering change management process
- Gain superior process resource and definition control

*Collaborative tools for research and development, new product introduction, and design engineering. Create and maintain bills of materials, product specifications, resource needs, and material requirements all managed in detail. Every constituent works from a single version of the truth that leads to significantly compressed cycle times, improved efficiencies, and reduced costs. Tight BOM management improves the accuracy of inventory reporting and adds to precise inventory accounting to support demand-driven production and costing strategies.*

### **The Issue: Immediate Access to Current, Accurate Product Data**

As the pace of product development accelerates, you may find that product change information is not consistently distributed to all impacted groups. The same information may be referred to differently in various parts of your enterprise. Unaligned design and manufacturing operations, inconsistent definitions, and outdated supply chain and manufacturing processes can all contribute to such problems. To combat these issues, you need a manufacturing data management system that ensures both accuracy of your production records and visibility into the engineering change management process.

### **The Solution: Single Source for Item and Engineering Change Data**

Oracle's JD Edwards EnterpriseOne Manufacturing-PDM provides "input once, available everywhere" consolidation of your item descriptions. It integrates information for discrete, process, and repetitive operations in multimode manufacturing environments. This capability means that for hybrid products, such as bottled fruit juice, you have a clear line of sight to all manufacturing data from liquid to bottle, including ingredients/components, recipes, BOMs, work centers, routings, and costs.

You gain superior process resource definition and control with the flexibility to:

- Define quantities for intermediate products in any unit of measure at each stage in the manufacturing process
- Plan and create multiple unique items from one manufacturing run, and track and control co- and by-products
- Minimize manufacturing interruptions by including alternate operations and processes with your manufacturing routing

Most important, you can manage your engineering change request (ECR) and engineering change order (ECO) process through the same data source. Every phase of an ECR and ECO can be documented, with progress tracked by using

milestone events and status codes that you define. Online approval workflow with sequential and/or parallel notification and full ECR and ECO detail drill-down eliminates unnecessary delays. To close the loop between engineering and manufacturing, you can:

- View the change in BOM-proof mode to assess the “was/is” impact
- Facilitate the disposition of works-in-progress by displaying all open purchase and work orders
- Control the timing of the change with effective dates
- Automatically populate the item master and BOM with the new item’s information on ECR and ECO approval

JD Edwards EnterpriseOne Manufacturing-PDM focuses on four key elements to ensure accuracy and visibility: bills of material, work centers, routing instructions, and engineering change management.

### **(1) Easy-to-Manage BOM**

- Enter any number of past, current, and future configurations for an item, without creating additional part numbers.
- Access items online by using the item-description search criteria.
- Define quantities of intermediate products in any unit of measure as they progress through the manufacturing process.
- Enter similar items by copying a bill of material and changing only the information that is unique to the item to be added.
- Create and define different types of BOM such as an engineering bill, a manufacturing bill, or a rework bill.
- Facilitate the product definition and costing process.

### **(2) Comprehensive Work Center Definitions**

- Define the work center number, description, and link to the business unit.
- Identify queue and move times.
- Set operator, machine, and capacity by hours per day.
- Determine rates for setup, labor, machine, and overhead.
- Enter information for capacity planning.
- Define where an item is produced.

### **(3) Detailed Routing Instructions**

- Define each step of the manufacturing process with allowances for anticipated yield and scrap for each operation.
- Add alternate operations to routing instructions.

### **(4) Integrated Engineering Change Management**

- Control item changes from a single source.

- Incorporate approval changes to bills of material automatically.

Disconnects between engineering and manufacturing cost money and increase time to market. By integrating product manufacturing data and ECR and ECO information among departments, facilities, and even organizations, JD Edwards EnterpriseOne Manufacturing-PDM allows you to speed introduction of new product designs. And, by automating ECR and ECO notification and approval workflow, all those affected by a product change can collaborate on fixing potential problems before costly errors occur.

### Feature/Function Highlights

- BOM types: planning, batch, percentage, process
- Multiple BOM and routing versions
- Item description search and parts cross-reference
- Outside operations
- Component substitution
- What-if cost analysis
- From/through effective dates
- Alternate operations and processes
- User-defined item cost tracking
- By-products, co-products, and intermediate products
- Costed BOM inquiry
- Online ECR/ECO management:
  - By parent or component
  - ECR/ECO workbench
  - Parts list
  - Drawing revision control
  - Cost information
  - Electronic notification, approval, and audit process
  - Automatic BOM population
- Component locator
- Material where used
- BOM compare
- Lead-time inquiry
- Work center and cell

### Solution Integration

- JD Edwards EnterpriseOne Human Capital Management
- JD Edwards EnterpriseOne Financial Management
- JD Edwards EnterpriseOne Supply Management
- JD Edwards EnterpriseOne Supply Chain Management
  - Customer Order Management suite
  - Logistics suite
  - Manufacturing suite
  - Supply Chain Planning suite
